Abstract: 31 type specimens of six Lepidoptera species are being redesignated from RMNH to KSP collection: *Spilosoma renateae* De Vos, 2020 (Erebidae, Arctiinae), *Oeonosia lorentz* De Vos, 2020 (Erebidae, Arctiinae), *Cyana (Cryptanaema) habbema* De Vos, 2020 (Erebidae, Arctiinae), *Thyatira papuana* Ronkay et al, 2021 (Drepanidae, Thyatirinae), *Blavipelosia habbemaensis* De Vos, 2022 (Erebidae, Arctiinae) and *Agrotis (Papuagrotis) habbemae* Vink & Zilli, 2022 (Noctuidae, Noctuinae). A complete list of the specimens, species, types and references is presented.

Rangkuman: 31 type spesimen dari enam spesies Lepidoptera ditunjuk kembali dari koleksi RMNH ke KSP yaitu: *Spilosoma renateae* De Vos, 2020 (Erebidae, Arctiinae), *Oeonosia lorentz* De Vos, 2020 (Erebidae, Arctiinae), *Cyana (Cryptanaema) habbema* De Vos, 2020 (Erebidae, Arctiinae), *Thyatira papuana* Ronkay et al, 2021 (Drepanidae, Thyatirinae), *Blavipelosia habbemaensis* De Vos, 2022 (Erebidae, Arctiinae) dan *Agrotis (Papuagrotis) habbemae* Vink & Zilli, 2022 (Noctuidae, Noctuinae). Disertai daftar lengkap spesimen, spesies, type, dan referensinya.

Keywords: Renumbering, RMNH.INS, KSP-PIF, Papua, New Guinea

Introduction

In 2018 members of the Papua Insects Foundation visited the Baliem Valley and adjacent areas. One of the most interesting of these areas is Lake Habbema, at an altitude of about 3300 meters. The flora and fauna at this high altitude are very different from it at lower elevations. It is above the tropical tree zone and is dominated by tree ferns, Rhododendron, orchids and extensive grasslands. It is because of these extraordinary flora and habitat that many endemic species occur, and regularly new species are being found.

In 2018 some interesting endemic and also new species of moths were found near Lake Habbema, of which six species were recently described (De Vos, 2020; 2022; Ronkay et al., 2021; Vink & Zilli, 2022).

Necessary redesignation

The type material was designated to two institutions: Koleksi Serangga Papua (KSP), Universitas Cenderawasih (UNCEN), Waena, Papua, Indonesia, and the collection of Naturalis Biodiversity Center (RMNH), Leiden, The Netherlands.

According to new regulations in Indonesia, concerning research, collecting and property, the collected material from the 2018 expedition should be designated to Indonesian

institutions. The type material which was described by De Vos (2020; 2022), Ronkay et al. (2021) and Vink & Zilli (2022), and numbered with prefix RMNH.INS (Naturalis Biodiversity Center), will therefore be renumbered (table 1) with the prefix KSP-PIF (on a green label) and herewith redesignated to the Koleksi Serangga Papua, Universitas Cenderawasih, Waena, Papua, Indonesia. The PIF part in this prefix indicates that the material has been collected and studied by the Papua Insect Foundation, other than the prefix with just "KSP" (on a blue label), which indicates that this originates from the original KSP-collection (former collection of the late Br. Henk van Mastrigt).

The species concerned are: *Spilosoma renataeae* De Vos, 2020 (Erebidae, Arctiinae) (fig. 1), *Oeonosia lorentz* De Vos, 2020 (Erebidae, Arctiinae) (fig. 2), *Cyana (Cryptanaema) habbema* De Vos, 2020 (Erebidae, Arctiinae) (fig. 3), *Thyatira papuana* Ronkay et al, 2021 (Drepanidae, Thyatirinae) (fig. 4), *Blavipelosia habbemaensis* De Vos, 2022 (Erebidae, Arctiinae) (figs 5 & 6) and *Agrotis (Papuagrotis) habbemae* Vink & Zilli, 2022 (Noctuidae, Noctuinae) (figs 7 & 8).

Abbreviations:

KSP - prefix of Koleksi Serangga Papua, Universitas Cenderawasih, Waena, Papua, Indonesia

KSP-PIF - prefix of Koleksi Serangga Papua, but collected and studied by the Papua Insects Foundation

RMNH.INS - prefix of collection of Naturalis Biodiversity Center, Leiden, The Netherlands

UNCEN - Universitas Cenderawasih, Waena, Papua, Indonesia
